Chapter Notes: nlp_notes.pdf

external knowledge can accurately answer "J.K. Rowling" and even provide (pp. 21-30)

Main Points

- grammar and syntax help identify that "cat" is the subject, "sat" is the verb, and "on the mat" indicates location. [p. 21]

- statistical and neural models learn implicit knowledge a transformer model like gpt learns from millions of sentences that after "the capital of france is...", the most likely next word is "paris", without being explicitly programmed with this rule. [p. 21]

- integration of language and knowledge external knowledge can accurately answer "j.k. rowling" and even provide boosts understanding related information such as the publication year or book series. [p. 21]

Examples

- "a language model combined with external knowledge can accurately answer "j.k. rowling" and even provide related information such as the publication year or book series." [p. 21]

- "integration of language and knowledge external knowledge can accurately answer "j.k. rowling" and even provide boosts understanding related information such as the publication year or book series." [p. 21]
